PERSONAL PROFILE:

As an enthusiastic and driven individual, I am deeply passionate about technology and continuously seek opportunities to expand my knowledge and skills. Beyond formal education and professional experience, I actively engage in building home projects to explore and master various coding languages.

Driven by a relentless curiosity, I embrace home projects as valuable learning opportunities, allowing me to delve into different coding languages and hone my programming expertise. Whether creating custom applications, developing automation tools, or experimenting with emerging technologies, I relish the challenge of tackling new projects and pushing the boundaries of my capabilities.

Through these home projects, I have gained invaluable hands-on experience in a wide array of programming languages, including but not limited to Python, Java, C#, and JavaScript. Each project serves as a sandbox for experimentation and innovation, enabling me to deepen my understanding of coding principles and best practices.

Beyond technical proficiency, my home projects have fostered creativity, problem-solving skills, and a resilient mindset. I approach each endeavor with a determination to overcome obstacles and achieve tangible results, leveraging my passion for technology to drive meaningful innovation.

By actively engaging in home projects, I not only expand my coding repertoire but also cultivate a mindset of continuous learning and growth. This dedication to self-improvement and exploration reflects my unwavering commitment to personal and professional development in the ever-evolving landscape of technology.

SKILLS & ACHIEVEMENTS:

- Network knowledge, such as windows server 2010, VMWare and Active Directory
- Certified Network engineer – Expiry 2024
- Hardware knowledge such as building computers and making my own cabling and connections.

EDUCATION HISTORY:

Nottingham College

- 2017-2018 Level 1 IT Systems- Pass
- 2018-2019 Level 2 IT Systems– (Merit x3 Distinction x2)
- 2019-2020 Level 3 IT Systems - Merit

Arnold Hill Academy

- English Language - C
- Graphic design- L2D
- Maths - C
- Geography- D
- English Literature-C
- Science- C
- Computer Science-B
- ICT- B

WORK EXPERIENCE:

Full Stack Developer – US Website Team

Cyncly | 2022 – Present

Selected to join the US-based web engineering division at Cyncly, contributing to a modern, large-scale platform built within a monorepo architecture. The platform supports multiple interconnected systems, including CMS, ERP and additional business-critical applications used across international markets.

Working within a containerised, service-oriented architecture, I contribute to the design, development and optimisation of scalable front-end and back-end services. I collaborate across distributed teams to ensure performance, maintainability and long-term platform scalability.

Key Responsibilities & Contributions

- Develop and maintain backend services using TypeScript, Node.js and NestJS within a structured monorepo environment
- Build responsive and maintainable front-end applications using React
- Contribute to backend services and integrations developed in C#
- Work within Docker containerised environments to ensure consistent development, testing and deployment workflows
- Support architectural improvements focused on modularisation, service separation and performance optimisation
- Integrate and maintain reliable data flow between CMS, ERP and supporting internal systems
- Participate in code reviews, sprint planning and agile delivery cycles to deliver high-quality, scalable solutions
- Troubleshoot complex cross-service issues and implement sustainable long-term fixes

Software developer & eStore Specialist

Cyncly | 2022 – Present

Senior technical lead responsible for the development, stability and security of a high-traffic custom CMS within a demanding eCommerce environment. Operating across both application development and infrastructure management, I bridge engineering and operations to ensure resilience, compliance and performance.

Alongside leading CMS development, I manage Azure-hosted Linux infrastructure, ensuring high availability, system security and operational efficiency while supporting business growth.

Key Responsibilities & Achievements

- Architect, develop and maintain core CMS functionality using PHP, JavaScript and MySQL, with strong emphasis on API development and third-party integrations
- Lead feature implementation, performance optimisation and complex production issue resolution
- Administer Linux (CentOS) servers hosted on Azure VPS, including patch management, performance tuning and proactive maintenance
- Design and manage monitoring, alerting and backup strategies to protect databases and critical assets
- Maintain PCI DSS and GDPR compliance through security audits, vulnerability remediation and coordination with external penetration testers
- Implement CI/CD pipelines using Azure DevOps, improving deployment reliability and development velocity
- Manage firewall configuration, DNS, mail servers and infrastructure security hardening
- Deliver over £45,000 in annual infrastructure cost savings through server consolidation and resource optimisation
- Provide technical leadership, mentor colleagues and coordinate cross-functional initiatives to maintain operational continuity

20i – Technical support engineer and Infrastructure engineer

(August 2021 – July 2022)

As a Technical Support Engineer at 20i, a leading web hosting provider, I was a key member of the 24/7 support operation, primarily serving on the night shift team. My role extended beyond typical first-line support due to the provision of root access, allowing me to resolve complex technical issues directly. Daily responsibilities involved using our in-house ticketing and live chat platforms to assist customers with a wide array of problems, from diagnosing website errors like 500 and 404 codes to performing advanced server-side interventions.

The position demanded strong back-end proficiency, where I routinely used BASH for tasks such as implementing IP-based firewall rules, investigating security logs, purging CDN caches, and writing automation scripts. I also managed and troubleshooted MySQL databases, handling queries, optimizations, and data recovery processes. A critical part of the role involved investigating failures in REST APIs, such as those halting service renewals or payment processing, requiring careful analysis of logs and API responses. To ensure systemic reliability, I actively monitored server infrastructure and network status using tools including Nagios, responding promptly to alerts regarding service health, resource usage, and potential security incidents.

Beyond reactive support, I proactively managed customer hosting environments. This included tasks like configuring and troubleshooting email services (SMTP, IMAP, spam filtering), managing domain and SSL certificate renewals, and performing migrations between servers or hosting packages. A further aspect of my role was enhancing team resources by authoring and updating detailed technical guides and troubleshooting articles for our internal customer support database. This involved documenting solutions for common and complex issues, such as flushing DNS zones, clearing application caches, and resolving specific content management system (CMS) errors.

I thrived in the role's dynamic nature, where each day presented unique technical challenges that required a methodical and hands-on approach to problem-solving. The position provided deep, practical experience in maintaining the stability, security, and performance of live web hosting infrastructure under pressure.

Phoenix Networks – Data infrastructure engineer (January 2021 – August 2021)

As a Data Infrastructure Engineer at Phoenix Networks, I hold a full-time, field-based role focused on the end-to-end deployment of critical network and security systems. My work involves traveling to client sites to install and configure the physical backbone of their data infrastructure. This includes racking and stacking hardware, running and terminating copper and fibre optic cabling, and performing basic fibre splicing where required.

A core part of my responsibilities is the configuration of network hardware, primarily using Cisco switches and routers. I manage the patching and logical setup of these devices to establish robust local area networks (LANs). Concurrently, I implement integrated security solutions, including the installation and programming of Paxton access control systems and Hikvision CCTV surveillance networks. This involves creating user groups, defining permission tiers, and configuring system parameters to meet specific client security protocols.

To support these deployments, I utilise Excel extensively for hardware inventory management, asset tracking, and planning site-specific configurations. My position provides hands-on, practical experience in building secure and reliable data infrastructures from the ground up, combining physical installation with logical system configuration.

Hidden hearing - Tele-appointer

(February 2020 – August 2020)

I was employed by Hidden Hearing as a Tele-Appointer, based at their Nottingham city centre call center. My role involved a 19-hour weekend schedule from Friday to Sunday. Day-to-day responsibilities primarily focused on booking appointments for prospective clients seeking hearing tests or purchasing hearing aids. This included managing both inbound calls from website enquiries and conducting targeted outbound calls.

The position also encompassed elements of first-line customer support. I was responsible for logging customer concerns and queries into the internal ticketing system, as well as responding directly to general phone and email enquiries to ensure a seamless customer journey from initial contact to confirmed appointment.

McDonald's - Crew Member (July 2019 – February 2020)

In this role as a Crew Member, I gained foundational experience in retail operations and front-of-house service. My responsibilities were varied, encompassing customer service on the till, efficiently picking and packing customer orders, managing stock replenishment, and ensuring the sales floor was clean and well-presented. This position provided invaluable, hands-on insight into the realities of a fast-paced work environment and the importance of teamwork and diligence in delivering a positive customer experience.

Sherwood Shot blasting – Labouring (2016 – 2018)

I gained hands-on, practical experience through weekend work. This involved operating a forklift, assisting with demolition projects on industrial sites and residential gardens, and supporting shotblasting work. I learned directly on the job, picking up each skill through doing it. The work was physically demanding but very rewarding, and it gave me a solid appreciation for a strong work ethic.

HOBBIES & INTERESTS:

Outside of my professional commitments, I maintain a keen interest in both social and technical pursuits. I enjoy spending time socially with friends and have a broad taste in music, ranging from old-school rap to 1960s rock. My personal hobbies include gaming, with a particular fondness for classic titles like Old School RuneScape, and I have previously been active in sports such as ice hockey and airsoft.

On a technical front, I run a small web design and hosting company as a weekend side project. This entrepreneurial hobby allows me to apply my skills in a practical business context, managing client projects, server infrastructure, and bespoke website development from end to end.
